SUMMARY

- Senior QA Automation & Quality Engineer with **5+ years** of experience designing scalable quality systems, data-validation pipelines, and AI/LLM evaluation frameworks.
- Specialized in prompt engineering, stratified sampling methodologies, and monitoring AI QA model performance (Precision, Recall) for high-fidelity user interactions.
- Strong background in Python, custom tooling (Streamlit), and building human-in-the-loop validation systems to prevent automation bias and ensure data integrity.

TECHNICAL PROJECTS

AI Agent Ecosystem & QA Evaluation Frameworks

Jan 2026 – Present

- Engineered a custom **MCP Server** to expose localized system data to LLMs, creating an evaluation framework for context-aware code generation and automated debugging.
- Developed a suite of **Custom Agents** for Copilot/Gemini CLI to automate complex engineering workflows and implement multi-tiered human + AI arbitration checks.
- Built **AI-native Skills** that integrate with agentic workflows to perform automated API contract testing, prompt validation, and vulnerability scanning.

DevUtils & ARM (Automation Resource Management)

ChargePoint

- Spearheaded the design of "DevUtils", a Python/Streamlit-based internal utility used for deep log analysis, API simulations, and test reporting.
- Architected modular data-validation pipelines that accelerated defect triage by 30% and improved human-in-the-loop review efficiency by highlighting ambiguous edge cases.

EXPERIENCE

Senior Software QA Engineer

Apr 2025 – Present

ChargePoint, Gurugram, India

- Acted as the technical QA lead, designing comprehensive automated test strategies and quality frameworks aligned with key business outcomes for critical EV charging releases.
- Implemented data sampling techniques and stratified sampling methodologies to prioritize high-risk interactions and backend data anomalies before production releases.
- Managed the ingestion of validation data to drive continuous, high-fidelity retraining of internal analysis tools, achieving **40% faster regression cycles** via CI/CD pipelines.

Software QA Engineer

Apr 2022 – Apr 2025

ChargePoint, Gurugram, India

- Designed scalable test frameworks using Python and Playwright, **reducing manual test effort by 25%** and establishing strict QA methodologies.
- Leveraged Cybersecurity PGP (IIT Roorkee) expertise to embed security, data privacy, and bias-prevention checks directly into API validation pipelines using tools like Burp Suite and Wireshark.

Programmer Analyst Trainee

Feb 2021 – Mar 2022

Cognizant, India

- Automated critical UI test cases for enterprise healthcare projects (CVS Health) using Selenium and Java, improving test coverage and reliability.
- Contributed to test framework enhancements and Agile execution pipelines, supporting rigorous contact center and application QA methodologies.

EDUCATION

PGP, Cyber Security

Jul 2023 – Mar 2024

Indian Institute of Technology, Roorkee

B.Tech, Electronics & Communications Engineering

2017 – 2021

Jaypee Institute of Information Technology

SKILLS

Quality & AI Evaluation: LLM-based Evaluation, Prompt Engineering, Stratified Sampling, Automation Bias Prevention, Golden Labeling, Human-in-the-loop (HITL) Validation

Frameworks & Languages: Python, Java, Pytest, Playwright, Selenium, FastAPI, Streamlit

DevOps & Infrastructure: Unix, Docker, Jenkins, Git, CI/CD Pipelines, Linux CLI, Model Context Protocol (MCP)

Databases & Security: RDBMS, Network Monitoring, Wireshark, Burp Suite, API Security Validation
